

Abstract of the Invention

Provided are methods and compositions for detecting and
5 treating normal, hypoplastic, ectopic or remnant tissue, organ
or cells in a mammal. The method comprises parenterally
injecting a mammalian subject, at a locus and by a route
providing access to said tissue or organ, with an composition
comprising antibody/fragment which specifically binds to
10 targeted organ, tissue or cell. The antibody/fragment may be
administered alone, or labeled or conjugated with an imaging,
therapeutic, cytoprotective or activating agent.
